

CHARGER INTAKE HOSES

**A WIDE RANGE OF NEW COMPONENTS
FOR THE MODERN DRIVE MECHANISM**

Downsizing and the consequences

Today's motors of the automotive manufacturers follow the trend of the "downsizing": small cubic capacities with efficient mileage which are charged up over the turbocharger. As a consequence also this technic is liable to an enormous abrasion. Caused through of the type conditionally vibrations, pressure loadings, material fatigue as well as high thermal hence a lot of cars need charge intake hoses. Also with the exchange of components – as for example the turbocharger – normally the charger intake hose has to be replaced also.

Assortment with a high market coverage

Metzger Autoteile is offering this attractive product group from now on. All charger intake hoses are in accordance with material and form to the requirements of the automotive industry. Another quality feature are the original adapted metal pins, which are included in the scope of delivery. Additional the production date is printed on each part.

- » **Vehicle significant, accurately fitting**
- » **Required wide band clamps always as original spare part**
- » **Applicable for every charging pressure to OE requirement**
- » **Reliable for all thermal pressures**
- » **is resisting the highest pressure loads**
- » **Identification with production date**

The range „charger intake hoses“ from Metzger Autoteile is a professional solution for the ambitious workshop business. Please ask for a complete overview of the qualitative high class products.

Convincing service

- » complete offer with excellent quality
- » individual, customized stock proposals
- » reliable and fast delivery
- » regional sales support
- » stock-update
